## Work experience

### Frontend Developer – [Single.Earth](#) Full time

 Dec 2021 – Nov 2022 (11m)

Blockchain – climate startup.

Fintech

Angular

RxJS

Angular Material UI

Bootstrap

Go

SCSS

- Developing / testing / maintaining client-side code.
- Pixel perfect Figma (design, wireframes) –> Angular.
- Frontend optimization for performance and accessibility.
- Huge forms for internal KYC project.
- Close collaboration with design, product management and other engineering teams.
- 300+ green unit tests in Jest.
- Agile CI/CD (weekly sprints, weekly deployments via Circle CI).

### Full-Stack Developer – [RutaNN](#) Part time

 Freelance

Employment agency

Agency

React

SCSS

Node

Nginx

Express

- Working on both backend and frontend using the latest technologies.
- Designing and developing the application from the ground up in communication with the client.
- Custom server configuration including domain, nginx, reverse proxy.
- The final product has exceeded clients expectations.

## Recent projects

[DistroHub](#)  [GitHub](#) 

NextJS

Typescript

Tailwindcss

DistroTube is a **full stack app**, which aims to provide a modern way to search for Linux distributions. There is also the possibility of **adding** it, which in the end I, as an admin, check and approve or not. One of the best things I learned working on this application is how to save images and convert and edit them on the fly (upload) using cloudinary.

[JobTracking](#)  [GitHub](#) 

NextJS

Typescript

Tailwindcss

Postgres

JobTracking is a **full stack app**, which allows **GitHub** users to track the jobs applied so far and to change their status. There is also a **demo account** for anyone who wants to try the application.
